# Navigating the Review My Driving Website

## Creating an Account

Links for reference: https://reviewmydriving.co/register

### Ways to Sign Up:

There are two ways to create an account for Review My Driving, you can use an existing Google account to automatically sign up and log in each time you visit the site. The second option is to fill out the information on the register page. The only info we require: email, first & last name, and a password. None of this info is saved in our database, we use google authentication to handle all user data. We do not have access to passwords or sensitive information.

### How to Sign Up:

1. Click this link to go to the registration page
2. Either fill out the required fields or scroll to the bottom and click “Continue with Google” and follow the prompts
3. Once your account is created, you can go to your account and start to get a feel for what the website looks like when logged in
4. Contact us! We have a manual process where we create a business user, once you’ve created an account we can go ahead and get you access to business features. You can expect a response to your contact request within 24 hours.

### FAQs:

#### Q: Is my information stored securely?

A: YES! We use Google authentication to handle all our user information. The only data we can access are emails and user identification codes. No passwords are stored on our end. Period.

#### Q: What if I want to sign up with a provider other than Google?

A: We currently don’t have support for other sign-in methods such as: Facebook, Twitter, or Apple. However we do plan to add support for these and more in the future.

### Q: Why do you lock business users behind a manual process?

A: We are a small operation right now and we want to monitor the number of users with access to our features. In the future we have plans to automate this process but for now we'd like you to contact us if you're interested in learning more about our software offerings!

### Q: How long does account approval take?

A: Once you've created your account and submitted a Contact Request Form, we will get back to you within 24 hours and get you access.

### Q: Do I need to be a fleet manager to create an account?

A: No! Anyone can create an account, the only thing is you won't really have access to much. We don't currently have plans to support consumers in the future. We're pivoting to be a business application that fleets can implement to gain insights into their fleet that they otherwise wouldn't have had access to before.

# Logging into Review My Driving

Links for references:https://reviewmydriving.co/login

## Ways to Sign In:

There are two ways to sign in when accessing Review My Driving. You can either type in your credentials or login with the "Continue with Google" button and follow the prompt.

## How to Sign In:

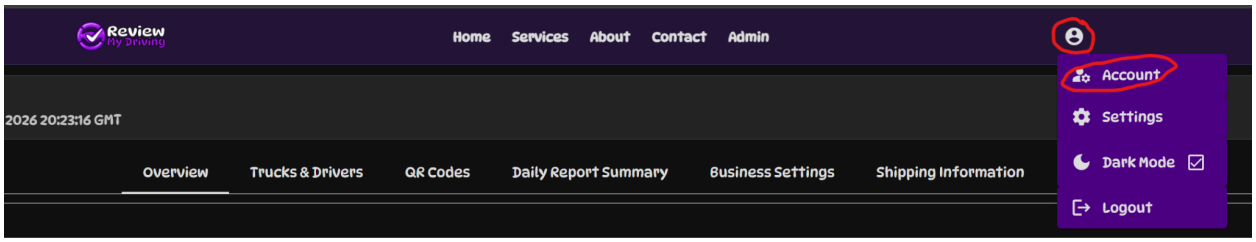
Either type in your credentials and click "Log In" or click "Continue with Google" and follow the prompts to get logged in.

# Navigating your Account

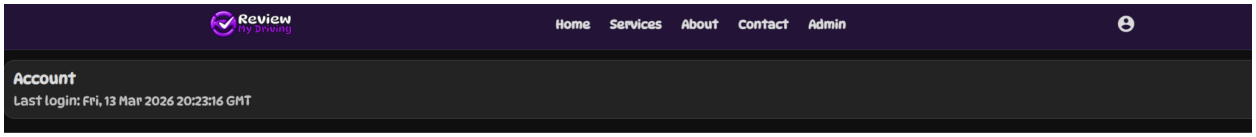
Links for reference: https://reviewmydriving.co/account

# Overview & Navigation:

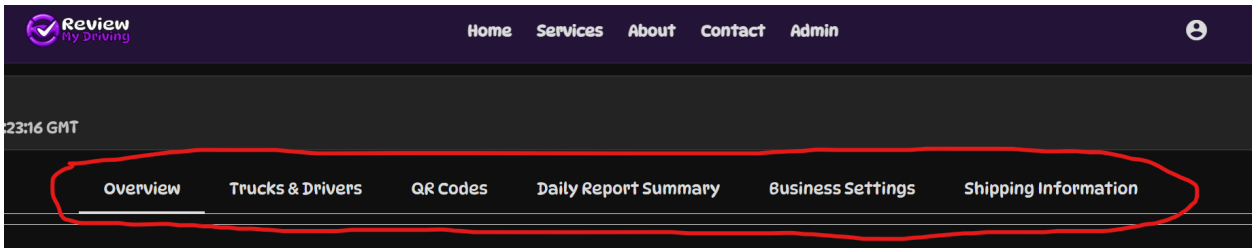
When you have logged in and accessed your business account, you can click on the profile icon in the top right of the screen and click “Account”



Once on the Account page, you’ll see at the top a last login time. This shows you the last time this account has logged in.



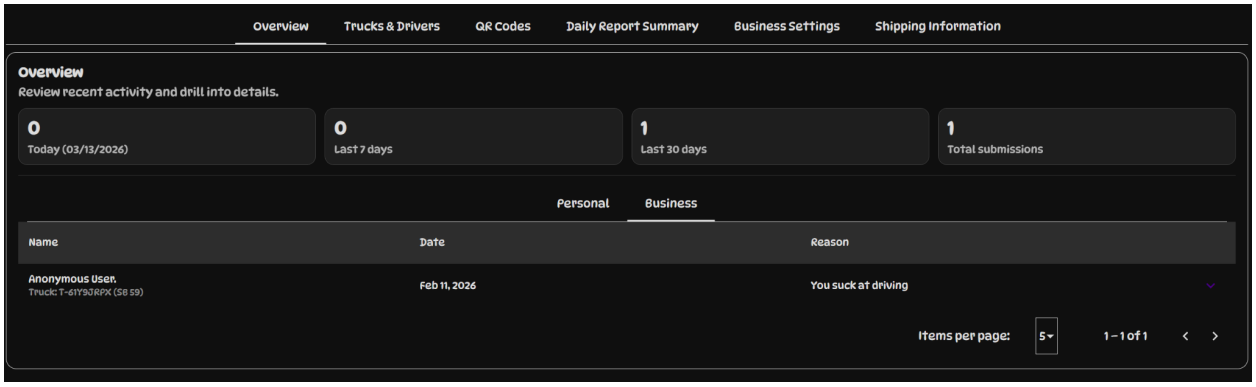
Below the login time, you should see a panel navigation bar. It will look like this:



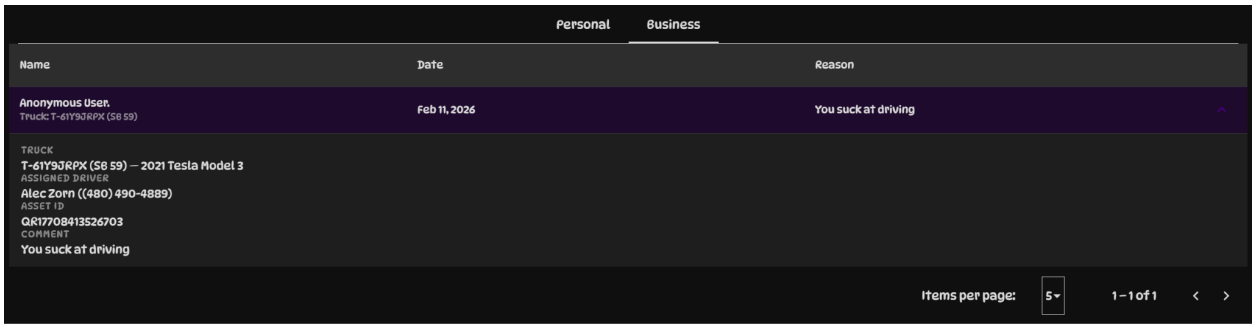
This is how you will navigate the different areas of the site. From here I will go into detail on the different panels that are available to you to use.

# Overview - Account Panel:

This is the panel that shows you an overview of all your submissions and some statistics about how many have come through over different periods of time



As you can see by looking at my test account here, we have zero submissions for today, zero over the last seven days, one in the last three days, and one total submission. Below the tiles you'll see a table with all the submissions you've received, with the most recent displayed first.



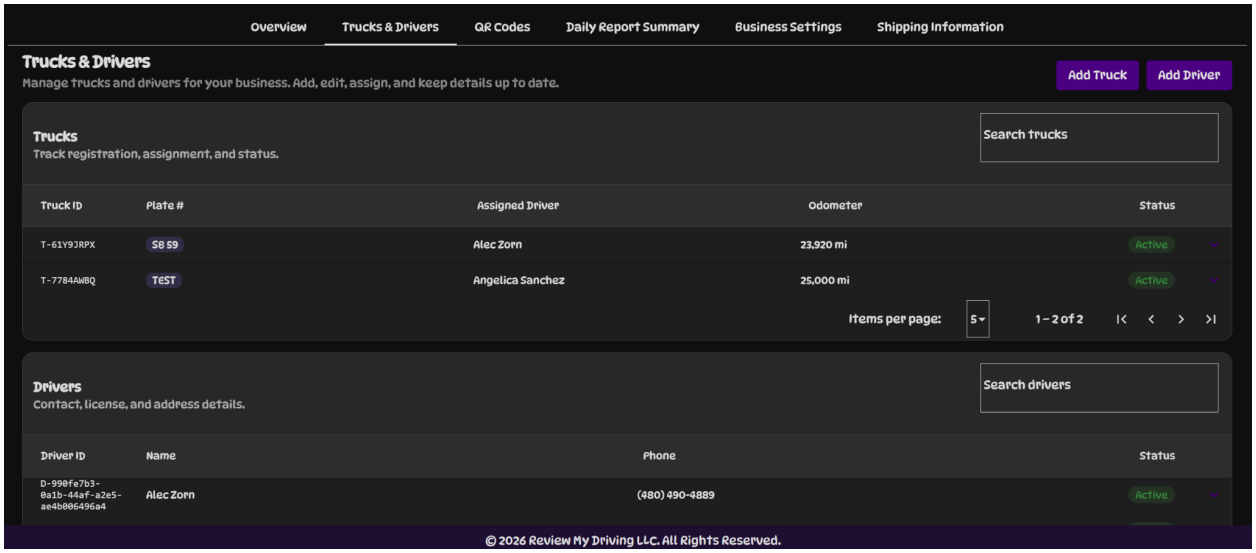
You can click into a submission to see more information about the review. The details include:

- Truck that received the review
- Driver assigned to the truck when review is received
- QR code scanned
- Comment left by the reviewer

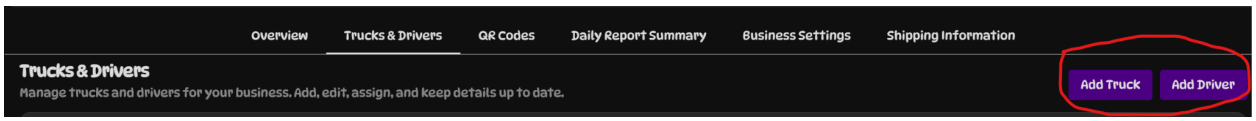
This information lets you see information about your employees and their driving habits. It also allows you to provide them with some feedback from real world people submitting reviews so they can adjust their behavior on the road. This will decrease company liability and give you peace of mind knowing your drivers follow your guidelines.

# Trucks & Drivers - Account Panel:

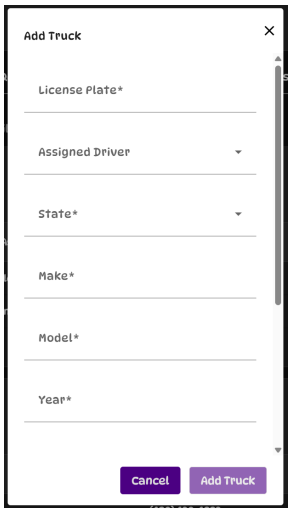
This is the panel that allows you to manage your trucks and drivers that your business has in operation.

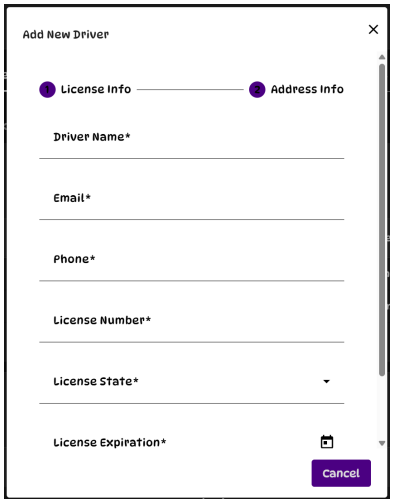


The panel itself is designed to be as easy to use as possible. On the top right you'll see buttons for "Add Truck" and "Add Driver"

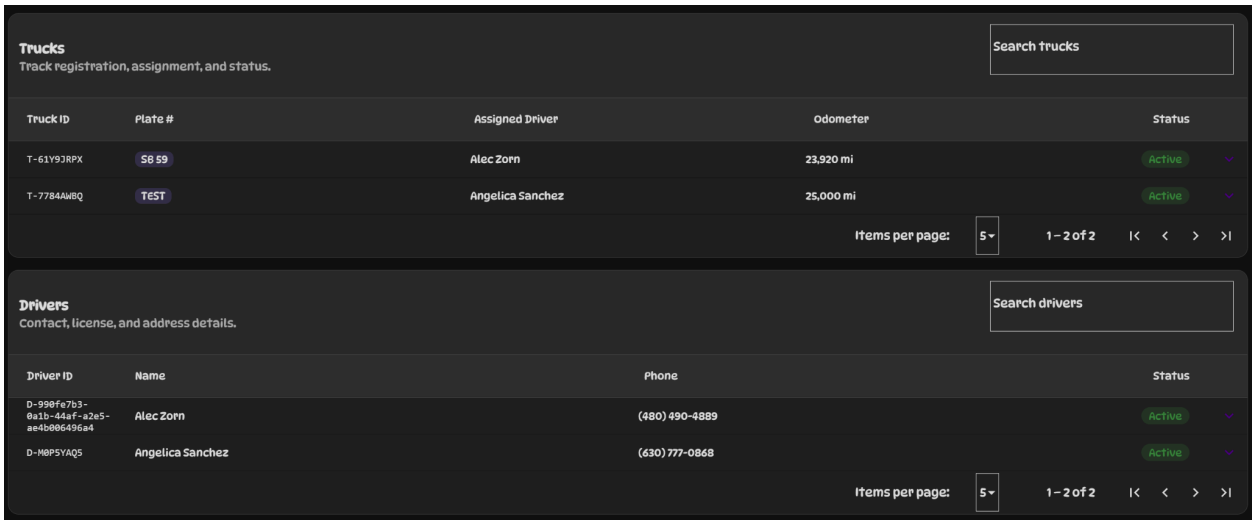


Clicking either of those will open the corresponding modal to enter information, where an asterisk indicates a required field:

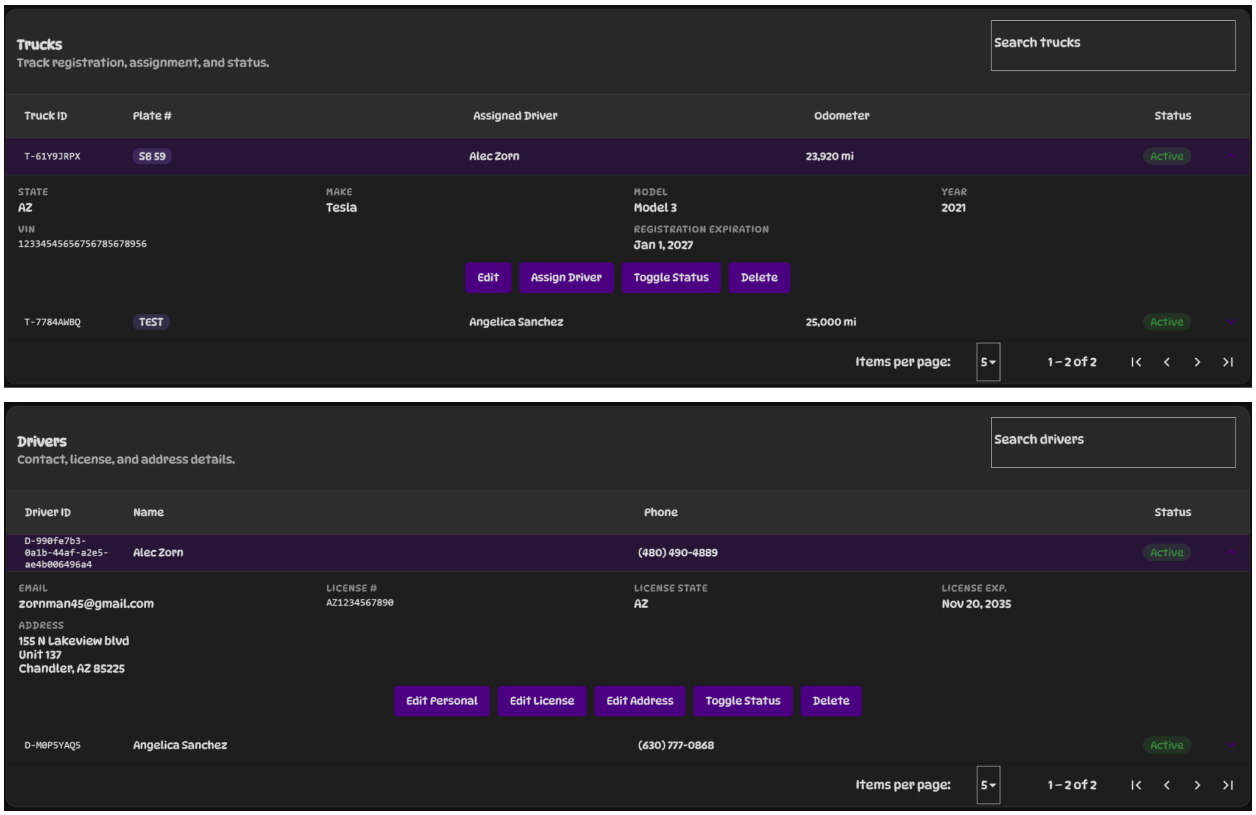




After entering all the correct information and finishing the process, the dialog box should close and you should see your newly entered information appear in the tables below:



Each table is filterable by the input to the top right of the corresponding table, you can filter by any field that is displayed in the row, not the expanded details area. In here you'll find information related to your trucks and drivers. The rows themselves show minimal information to allow you to quickly identify which one you're needing to look at. Each row is expandable by clicking on it:



After expanding a row, you'll see additional information about that truck/driver. You will also see several action buttons in the expanded content, which open dialog boxes and let you modify any information needed.

For a truck you can perform the following actions:

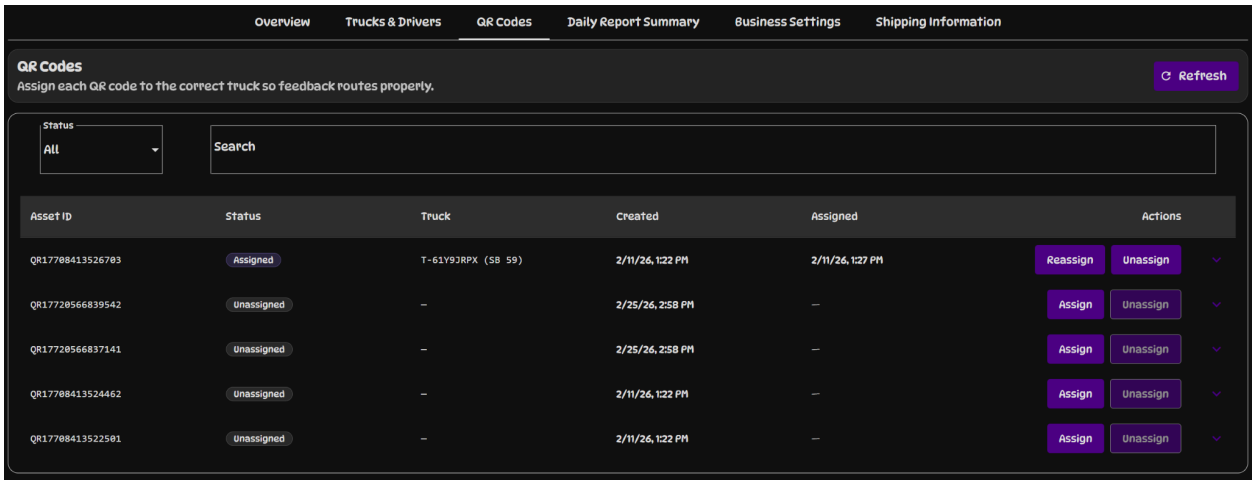
- Edit - Lets you modify any information about the truck
- Assign driver - Lets you update the driver assigned to the truck
- Toggle status - Set the truck to active/inactive, useful for if the truck is getting maintenance and is out of commission
- Delete - Remove the truck from your records entirely, use if truck was sold, damaged or lost

For a driver you can perform the following actions:

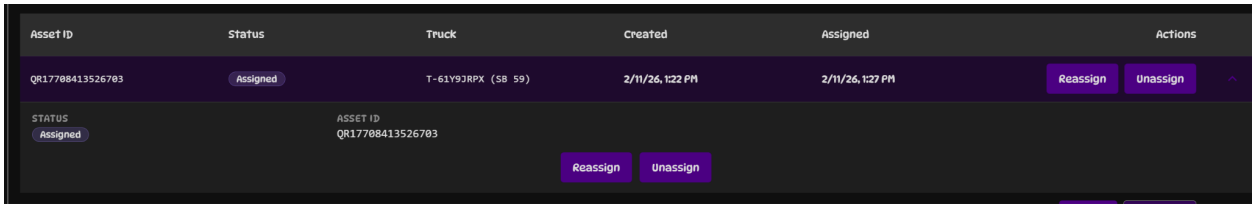
- Edit personal - Lets you modify personal information about the driver: name, email, phone
- Edit License - Lets you modify a driver's license information
- Edit address - Lets you modify the address information for an employee
- Toggle status - Set an employee as active/inactive, useful for when an employee goes on vacation or leave
- Delete - Remove the driver from your records entirely, useful for when an employee quits or is terminated

## QR Codes - Account Panel:

This is the panel that lets you manage your QR codes and what truck they are assigned to



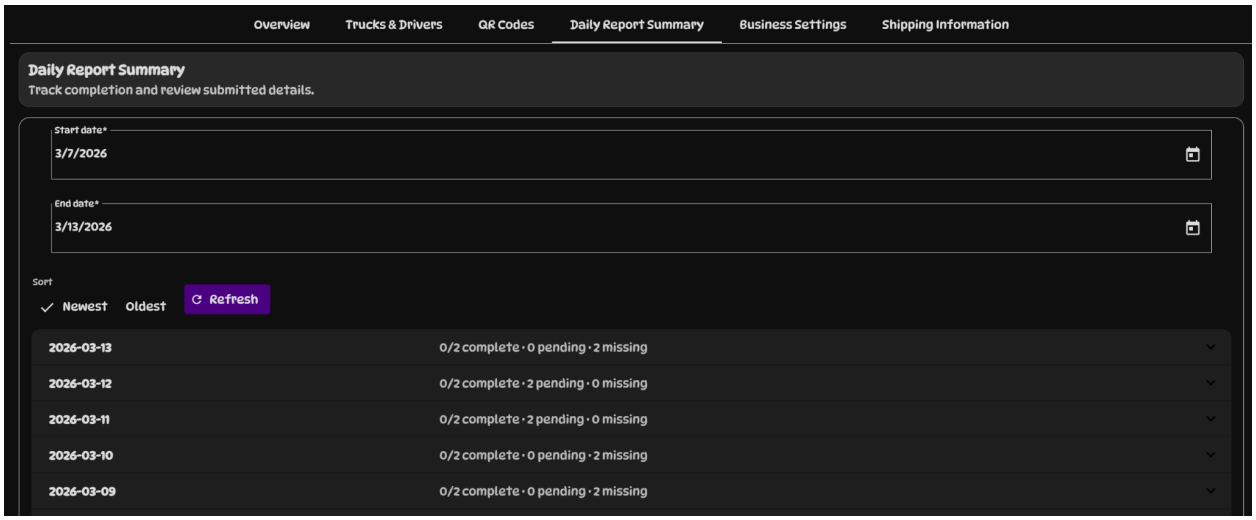
As you can see by the screenshot, I have five QR codes that were generated and one is assigned to a truck. You can see the date the QR code was created and when it was assigned. The search along the top lets you search by any details, asset id, truck, created or assigned. You can also filter by the status dropdown in the top left



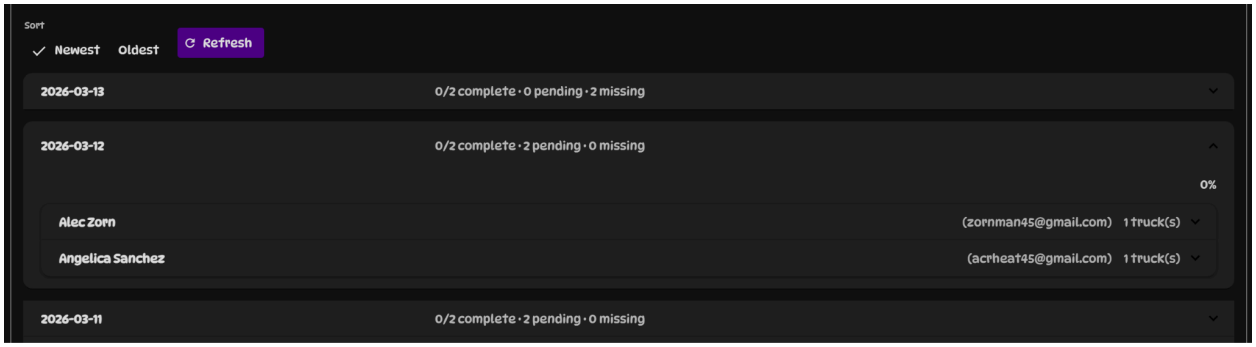
Clicking to expand a row in the table will show the status and asset id, as well as the same buttons shown in the action column

## Daily Report Summary - Account Panel:

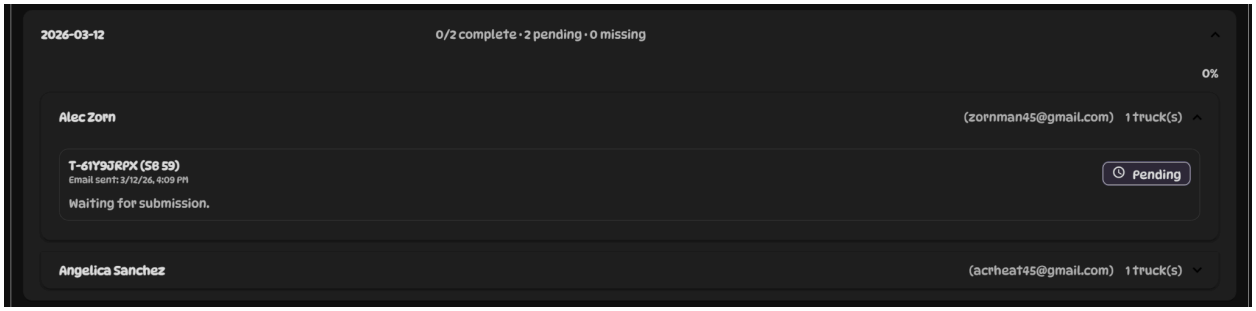
This panel lets you view all the daily reports, their status, and the information submitted. We automatically populate the start and end date to be the last 7 days. You can change this to be a max of 30 days. You can also sort by newest/oldest and refresh the list.



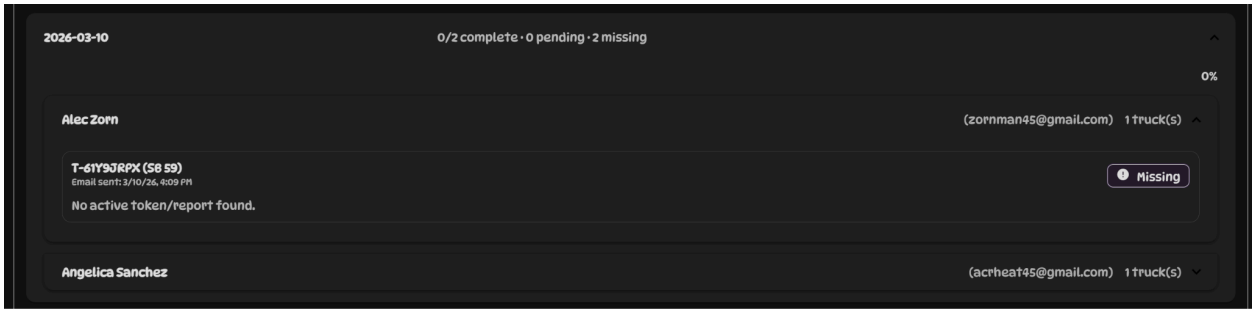
In order to drill down into a day's reports, click the corresponding expansion panel:



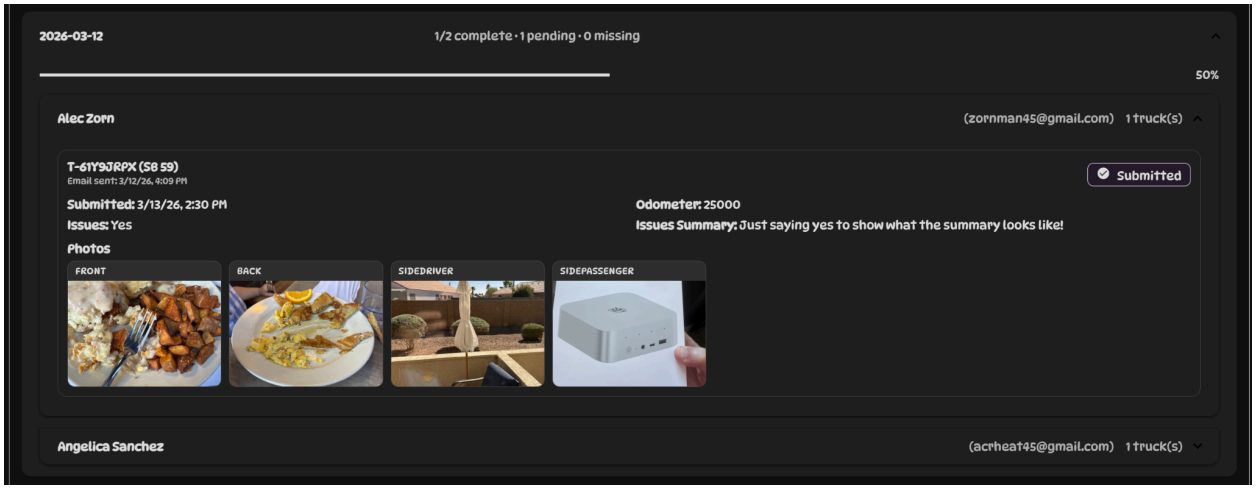
When expanded you can see the driver's name on the left, their email on the right along with the number of trucks they operate. Clicking a driver's name will open the submission for that day and that truck:



This is the view when a submission is pending, meaning the email has been sent and we are awaiting the driver to submit it.



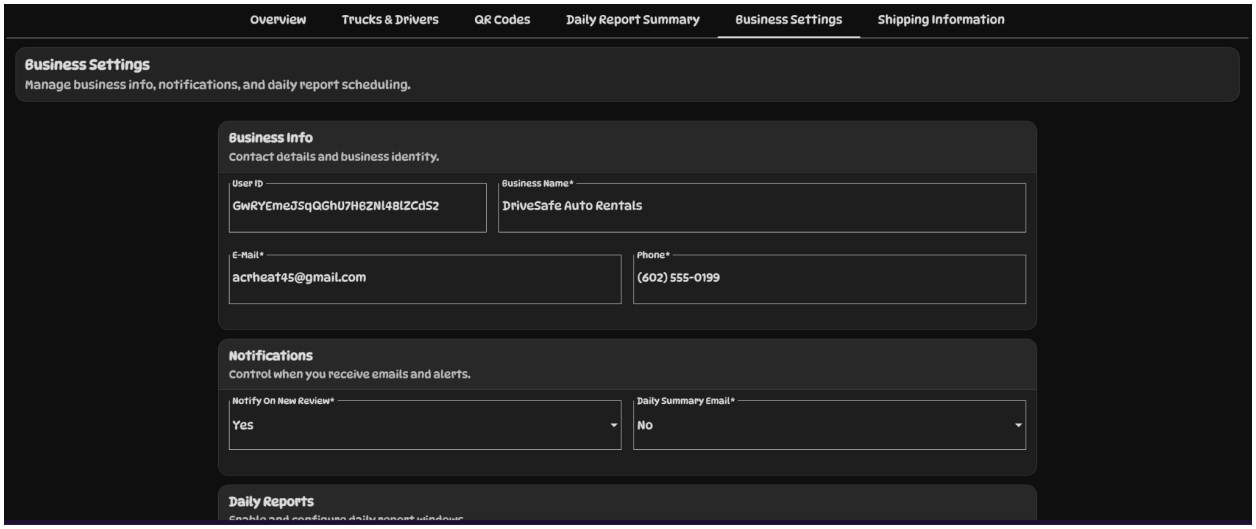
Missing means the driver did not submit the report within the 48 hour timeframe.



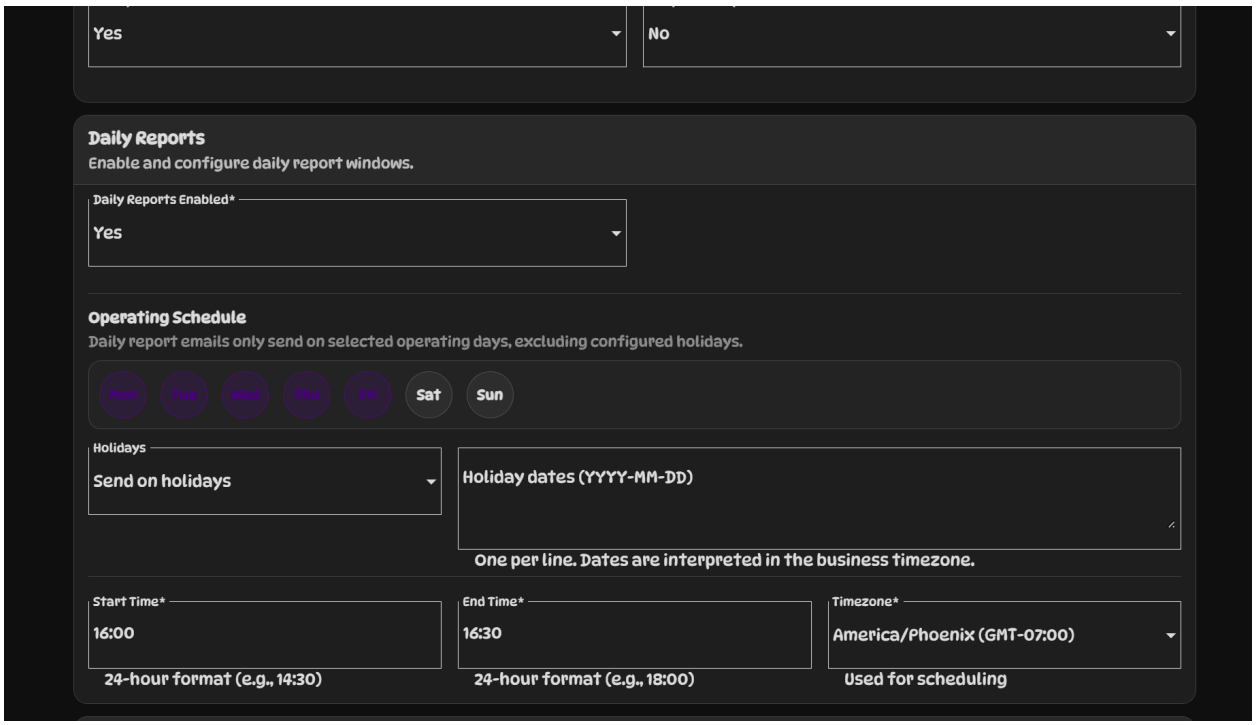
This is the final status a submission can be submitted. You can see the truck id, license plate, submitted date and time stamp, and all other information that the user submitted along with the images.

# Business Settings - Account Panel:

This is the panel where you can configure all your different settings based on your business needs.

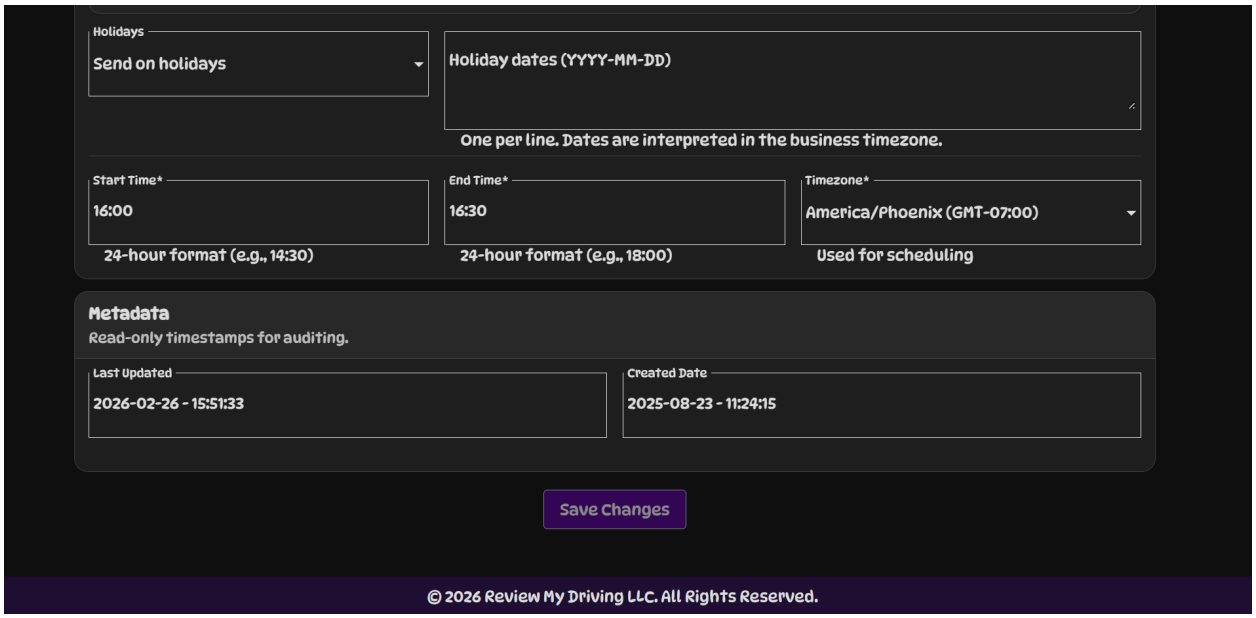


Here you can set your business name, the email you want reviews sent to, and your business phone number. Below that is Notifications, where you can set whether you want to be notified on every new review via email or not. Daily summary email is not yet configured, but in the future you'll be able to use it to send a daily summary of all reviews received that day instead of on each submission.



Moving on to the Daily Reports section, this is where you can enable/disable the end-of-day reports that get sent out to your drivers. When set to no, daily reports will not be sent out. (NOTE: In order to receive the report emails, your drivers need to be assigned to a truck) When set to yes, you'll see other options become available.

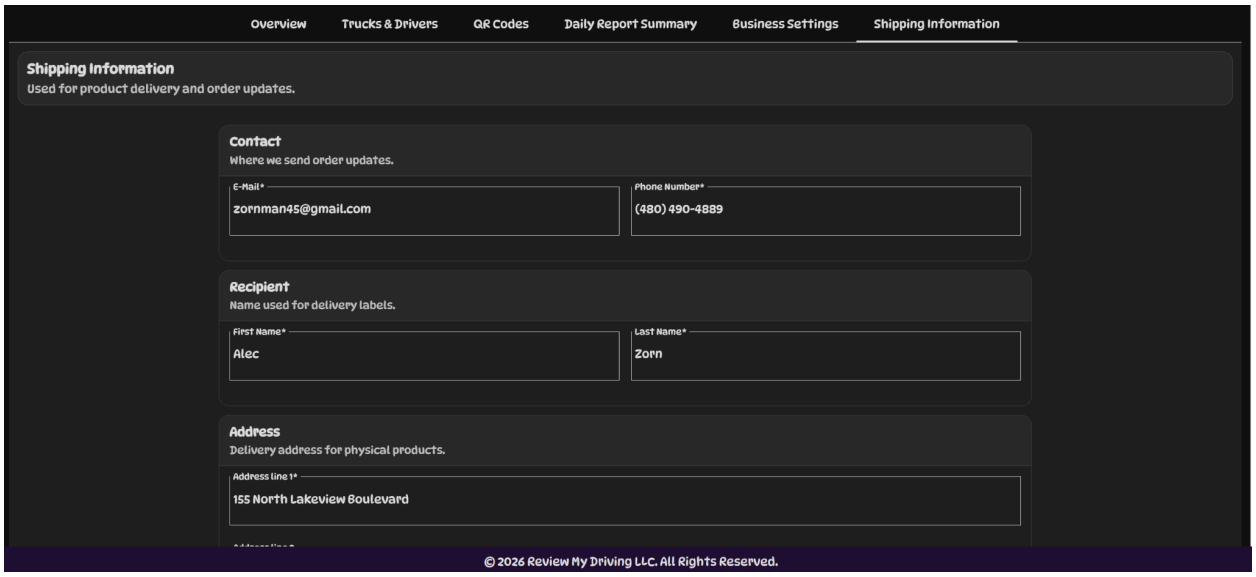
Operating Schedule - This is where you can configure your days of operation, any holidays that your business takes. This is used to determine whether the system should send out emails that day or not. The start time and end time is the timeframe in which you'd like emails to be sent out, set in a 24HR format. In the screenshot you'll see that for my business, emails get sent out between 4 and 4:30pm in the america/phoenix timezone. Set the timezone to whatever you're in.

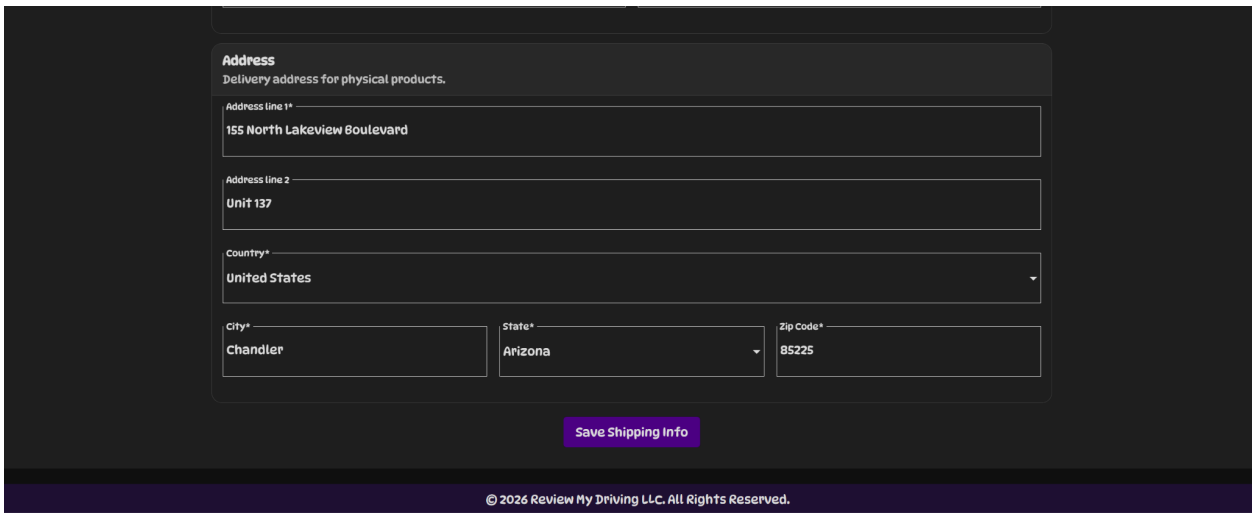


Below that is metadata about your account, the creation date is displayed and the last updated is changed whenever you make changes to the settings.

# Shipping Information - Account Panel:

The shipping information panel is where you configure other business options like your business address, owner's name, email and phone. This is used for when we ship you QR codes so we know where to send them.



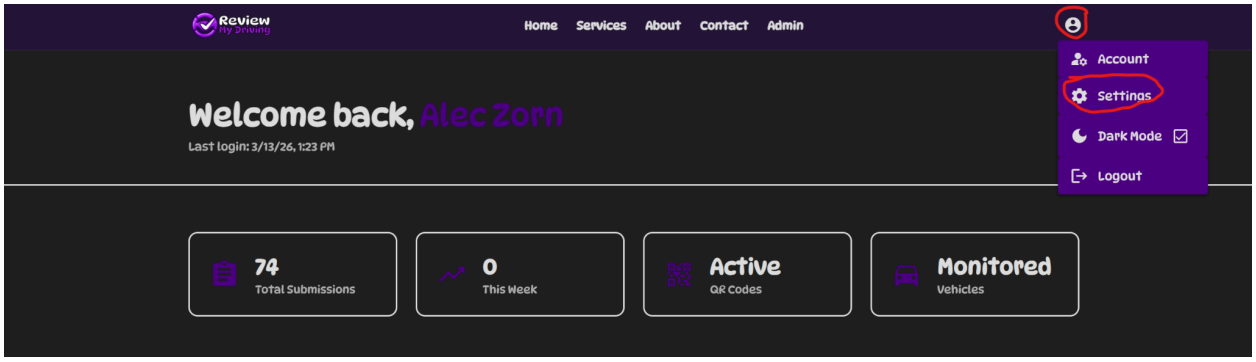


Scroll down and click save to save the information.

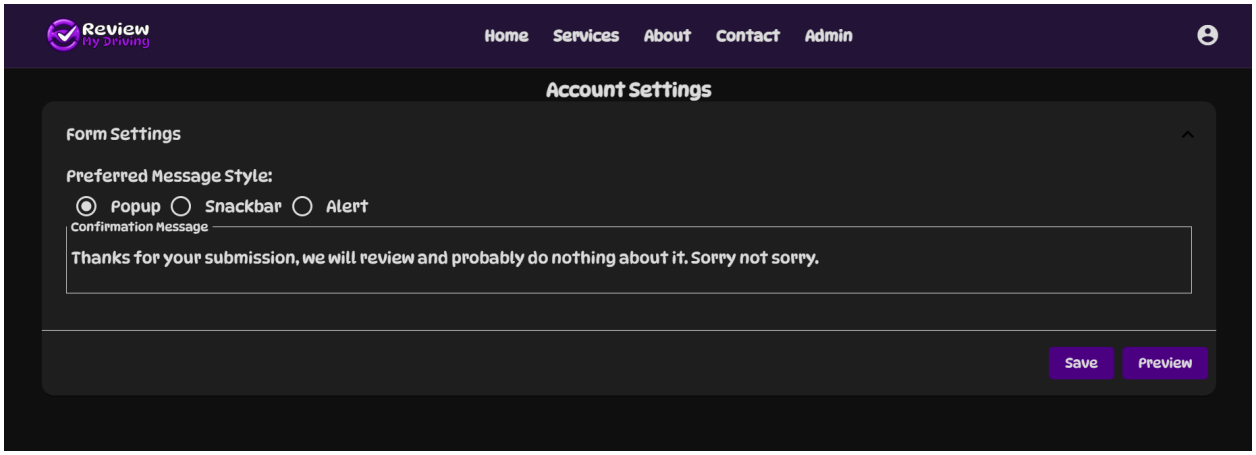
# Account Settings

## Navigating to Account Settings:

Click the account icon in the top right of the header, then click “Settings”



The settings page is where you can confirm a custom review confirmation message:



You can choose the message style and the message itself. Clicking Preview will let you see the message and format before saving it, clicking save will save the information.

Note: We plan to improve this page but for now it’s used strictly for the confirmation message shown to the submitter.
